Disposable Pressure Transducer

Why invasive blood pressure monitoring is needed?

Arterial blood pressure is most accurately measured invasively through an arterial line. Invasive arterial pressure measurement with intravascular cannula involves direct measurement of arterial pressure by placing a cannula needle in an artery (usually radial, femoral, dorsalis pedis or brachial).

The cannula must be connected to a sterile, fluid-filled system, which is connected to an electronic pressure transducer. This invasive technique is regularly employed in human and veterinary intensive care medicine, anesthesiology and for research purposes.

IBP (Invasive Blood Pressure) provides various clinical values. In surgical applications, the blood pressure is continuously and accurately measured, allowing medical staff to react to changes faster. For example, if anesthesia is given to the patient, the continuous monitoring can confirm it has not caused an adverse effect to the blood pressure. During certain operations, maintaining blood pressure in a very narrow range is critical; IBP creates the capability to monitor and maintain pressures. IBP also plays a critical role in situations where blood pressure is expected to fluctuate rapidly. By continuously monitoring the pressure, medical staff can be more timely and accurate in their reactions.

When to use:

- NIBP(Non-Invasive Blood Pressure) is not possible to use or when greater accuracy is required.
- Blood pressure must be maintained in very narrow range for a period of time.
- Blood pressure is expected to fluctuate significantly.
- Continuous blood analysis is required.

Method Comparison

ITEM	NIBP(Non Invasive Blood Pressure)	IBP(Invasive Blood Pressure)
Advantage	No wound	Continuous, accurate and reliable blood pressure monitor
Application	Out-patient, tentative diagnosis	Intensive Care Unit (ICU), Operating room, especially interventional operations
Disadvantage	Accuracy depends on human operating Factors	Penetration of blood vessel

Disposable Pressure Transducer

Features:

- Consistent and accurate readings during blood pressure monitoring.
- High durometer pressure tubing ensures optimal dynamic response.
- The convenient snap-tab flush device designed for easy priming and square-wave testing.
- Multiple standard configuration, adult and neonatal/pediatric.
- Versatile, dual function snap tab allows dynamic response testing.
- 3cc or 30cc per hour flow rates with dual function flush device.
- 6 connectors match most monitors and single, double, triple lumens are options.
- Administration sets pre-connected to the IBP Transducer sets
- Sterile and individually packaged.
- ISO, CE & FDA 510K.

PERFORMANCE SPECIFICATIONS

Disposable Pressure Transducer

DBPT-0103 IBP Transducer

Introduction

Provide consistent and accurate readings of arterial and venous blood pressure measurements.

Features:

- Kit options (3cc or 30cc) for both adult/pediatric patients.
- With single, double and triple lumen.
- Available with closed blood sampling system.
- 6 connectors and various cables match most monitors in the world.
- ISO, CE & FDA 510K.

Disposable Pressure Transducer

TYPE	Specification	Description	Package	Carton size
DBPT-0103		Adult	40pcs /carton	41.5×29×44.5cm
DBPT-0130		Pediatric	40pcs /carton	41.5×29×44.5cm
DBPT-0203		Intervention Use	40pcs /carton	41.5×29×44.5cm
DBPT-0303		Assembled Core Part	40pcs /carton	41.5×29×44.5cm
DBPT-0403		Double Lumen	20pcs /carton	41.5×29×44.5cm
DBPT-0503		Closed blood sampling system	20pcs /carton	41.5×29×44.5cm
DBPT-1003		Triple Lumen	20pcs /carton	41.5×29×44.5cm

Disposable Pressure Transducer

DBPT-0203 IBP Transducer

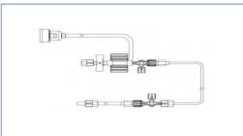

Introduction

Provide consistent and accurate readings of arterial and venous blood pressure measurements during cardiac intervention operations.

Features:

- Kit options (3cc or 30cc) for both adult/pediatric patients.
- 6 connectors and various cables match most monitors in the world.
- Widely used for interventional operations.

Disposable Pressure Transducer

Disposable Pressure Transducer

Fixation Plate for Disposable Pressure Transducer

With color coded labels provides easy identification of various components and be easily adapted to mount to the bedside or an IV pole. Reusable.

Transducer Fixation Plate Holder

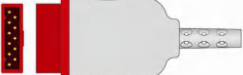

Uses thumb screws to secure Transducer Fixation Plate. Reusable.

IBP Interface Cables

Interface Cables are for connection between disposable or reusable transducers and the specified monitoring system. All cables are 3m in length and packaged individually. Cables are reusable, non-sterile.

Disposable SpO₂ Sensor

Introduction

A highly accurate sensor that features tear-resistant bandages.

Features:

- Offers high accuracy data during low saturation conditions, 60% to 80% SpO₂+/-3.
- Enable informed clinical decisions for patients in low saturation range.

Disposable SpO₂ Sensor

Disposable Central Venous Catheter Kit

Introduction

Central venous catheterization allows for an adequate therapy of critically ill patients during complex therapeutic interventions, especially in anesthesia, intensive care and emergency.

Features:

- Equipped with Guided Syringe or T-Type introducer.
- Sterile product and comes with single use.
- Contains scalpel, Catheter holder and clamp, indwelling catheter, injection cap, extension line clamp and other necessary equipments.

Disposable Central Venous Catheter Kit

The science of anesthesia breathing circuits

The evidence based guidelines shows that anesthesia breathing circuit components can help to reduce infections, prevent cross contamination between patients and maintain normothermia.

Why single-use circuits

- Respiratory pathogens can be transmitted through breathing circuits used to provide anesthesia. This can put reusable circuits at risk for contamination of the next patient.
- The reuse of breathing circuits puts both patients and anesthesiologists at risk for hospital acquired infections. Disposable circuits can be an important part of prevention protocol.
- The OR has unique infection control issues compared with other clinical care areas—due to the patient’s vulnerability and prolonged period under anesthesia. Consequently, microorganisms may be transmitted via contamination of normally sterile sites with a patient’s own bacteria and transmission of bacteria to subsequent patients in the OR.

Why use Heat Moisture Exchanger Filters (HMEF)

- HMEF is passive humidification with bacterial/viral filtration efficiency.
Gases emerging from anesthesia machine are dry and room temperature (cold)
- Tracheal intubation or use of laryngeal mask airway bypasses upper airway modifying pattern of heat and moisture exchange, lungs need 37° & 100% relative humidity.
- Cilia can stop beating with impaired mucocilliary function includes sputum retention & increased risk of infection .
- Warmed humidified air is better than cold, dry gases even in short cases.

Why use Bacterial Viral Filters (B/V)

- If used on both the inspiratory and expiratory limb, eliminates risk of switching the filtration limb at machine .
- Expert committees recommend the use of filters for control/prevention of infections.

Hisern Medical offers an extensive range of circuits covering smooth bore,expandable, corrugated, coaxial and Duo-limb tubing. From a basic Y-Piece circuit to a complete kit that includes a variety of components, we will have a circuit to meet your requirements. All anesthetic breathing systems are available in a wide range of configurations. For more challenging requests, we also can provide a complete custom solution.

Anesthetic Breathing Systems

A wide range of anesthetic systems are available in different lengths, configurations and tube types for your clinical requirements.

Anesthetic Breathing Systems

Disposable Anesthesia Mask (Inflatable)

The Disposable Anesthesia Mask is an anatomically correct shaped face mask designed for anesthetizing, oxygenating and ventilating any patient.

- Crystal clear dome for easy observation of the patient's condition
- Soft, shaped, air-filled cuff allows a tight fit to the patient's face
- Supplied with hook ring which can easily be removed if not needed
- The single patient use concept offers minimized risk of cross infection
- All sizes are delivered individually packed, sterile

Disposable Anesthesia Mask (Inflatable)

REF	Type	Size	Specifications	Qty/CTN
A9011	Inflatable	1	Newborn	120

Anesthetic Breathing Systems

Disposable Anesthesia Mask (Non-inflatable)

The Disposable Anesthesia Mask is an anatomically correct shaped face mask designed for anesthetizing, oxygenating and ventilating any patient.

- Super Light and soft material
- PVC and Latex free
- No need inflation before use
- Transparent for visual check of bleeding, vomitus, and spontaneous breathing
- Available in 6 different sizes

Disposable Anesthesia Mask (Non-inflatable)

Disposable Bacterial and Viral Filter

Introduction

Used in anesthesia and respiratory system, our B/V Filter is designed for the protection of the patient, hospital personnel and the equipment from potential microbial contamination.

Features:

- Lightweight reduces torque on tracheal connection.
- ISO connectors allow for safe and secure connections.
- Gas sampling port with cap for easy, safe monitoring of expired gases.
- ISO, CE&FDA 510K

A501-1

Parameters:

Heat Moisture Exchanger Filter (HMEF)

Introduction

Heat and Moisture Exchanger Filter (HMEF) combines the efficiency of dedicated breathing filters with optimum moisture return.

Features:

- Low dead space, to minimize dangers associated with re-breathing carbon dioxide.
- Lightweight, to reduce additional heavy on the tracheal connection.
- Maximizes the humidity of inspired gases.
- ISO, CE&FDA 510K

Parameters:

Description	Heat Moisture Exchanger Filter (HMEF, Adult)
Humidity Output	31mg/H ₂ O @ VT 500ml
Filtration Efficiency	BFE 99.9-99.999 % VFE 99-99.99%

Heat Moisture Exchanger Filter (HMEF, Contra Angle)

Introduction

Heat and Moisture Exchanger Filter (HMEF, Contra Angle) combines the efficiency of dedicated breathing filters with optimum moisture return.

Features:

- Low dead space, to minimize dangers associated with re-breathing carbon dioxide.
- Lightweight, to reduce additional heavy on the tracheal connection.
- Maximizes the humidity of inspired gases.
- ISO, CE&FDA 510K

A501-2-C

Parameters:

Description	Heat Moisture Exchanger Filter (HMEF, Contra Angle,Adult)
Humidity Output	31mg/H ₂ O @ VT 500ml
Filtration Efficiency	BFE 99.9-99.999% VFE 99-99.99%
Resistance @ 30 LPM	<1.5cmH ₂ O, (BFE 99.999%, VFE 99.99%)
	<0.8cmH ₂ O, (BFE 99.9%, VFE 99%)
Resistance @ 60 LPM	<3.1cmH ₂ O, (BFE 99.999%, VFE 99.99%)
	<1.8 cmH ₂ O, (BFE 99.9%, VFE 99%)
Dead space	45ml
Tidal Volume Range	150-1500ml
Connections	22M/15F-22F/15M
Gas Monitoring Luer Port with retainer strap	Yes
Weight	26.5±3g

Heat Moisture Exchanger Filter (Pediatric)

Introduction

Heat and Moisture Exchanger Filter (HMEF, Pediatric) combines the efficiency of dedicated breathing filters with optimum moisture return.

Features:

- Low dead space, to minimize dangers associated with re-breathing carbon dioxide.
- Lightweight, to reduce additional heavy on the tracheal connection.
- Maximizes the humidity of inspired gases.
- ISO, CE&FDA 510K

A501-4

Parameters:

Description	Heat Moisture Exchanger Filter (HMEF, Pediatric)
Humidity Output	31mg/H ₂ O @ VT 500ml
Filtration Efficiency	BFE 99.9-99.999 % VFE 99-99.99%
Resistance @ 20 LPM	<1.8cmH ₂ O, (BFE 99.999 %, VFE 99.99%) <1.0 cmH ₂ O, (BFE 99.9%, VFE 99%)
Dead space	20ml
Tidal Volume Range	150-300ml
Connections	22M/15F-22F/15M
Gas Monitoring Luer Port with retainer strap	Yes
Weight	16 ±3g

Tracheotomy Filter

Introduction

To create an opening through the neck into the trachea. A tube is most often placed through this opening to provide an airway and to remove secretions from the lungs.

Moisture loss	13.2mg H ₂ O/L
Calculated moisture return	26 mg H ₂ O/L
Resistance at 10L/min	<5.4 cmH ₂ O
Dead Space	6 ml
Weight	7 g
Connectors	15F
Minimum tidal volume	>60ml

Tracheotomy Filter

A501-7	Adult	200PCS /Carton	37.5×30×34.5cm	3 years

Absorbent of Carbon Dioxide (Soda Lime)

Introduction

Medical grade carbon dioxide absorbent which meets most clinical requirements and safety needs within anesthesia.

Features:

- Low Dust, Minimum dust levels with the benefits of high surface area and graded particle size.
- Low risk of carbon monoxide formation due to good resistance of dry gas desiccation.
- Low Bulk Density Less weight required to fill absorber and, therefore, less waste when refilling frequently (e.g., daily) prior to full exhaustion.
- Low odor due to reliable control of indicator dye concentration. Dye overdosing causes amines to be released; dye under dosing causes poor/no color change.

Ca(OH) ₂	> 75%
NaOH	≅ 4%
Granule hardness	≥ 99.0%
Moisture absorption	≅ 3%
Carbon dioxide absorption	≥ 26.0%
Shape	short cylindrical granule
Size(mm)	Φ3.0±0.1 L4.0-7.0
Indicator	white to purple, pink to white

Absorbent of Carbon Dioxide (Soda Lime)

REF	Specifications	Package	Carton Size	G.W	Shelf Life

Disposable Endotracheal Tube

Introduction

Designed for use in anesthesia, A&E and emergency medicine, Hisern Medical offers three varieties of ET tube: cuffed, uncuffed and reinforced, in a comprehensive range of sizes from pediatric to adult.

Features:

- Low-pressure cuff can keep it sealed in low pressure.
- The radio-opaque line can help to fix the position of tube.
- Two deep markers above cuff can point out the precise position of tube.

Disposable Endotracheal Tube

Disposable Endotracheal Tube (Reinforced Type)

Introduction

Designed for use in anesthesia, A&E and emergency medicine, Hisern Medical offers three varieties of ET tube: cuffed, uncuffed and reinforced, in a comprehensive range of sizes from pediatric to adult.

Features:

- Metal-screw of the tube can keep it straight. Low-pressure cuff can keep it sealed in low pressure.
- The radio-opaque line can help to fix the position of tube.
- Two deep markers above cuff can point out the precise position of tube.
- Supplied sterile, individually packed, latex free and for single use.

Disposable Electrosurgical Pencil

Introduction

Disposable Electrosurgical Pencils are used to fulgurate, coagulate, cut or dissect biological tissue by the applying electric current.

Features:

- Easy to clean
- Less smoke
- Light/weight and humanized skid-proof design makes the operator safer and comfortable during operation.
- ISO&CE.

Specification:

- 1.Length of ABS handle (mm):160mm
- 2.Length of stainless blade (mm):40mm,70mm, 80mm,120mm,140mm,160mm)
3. Diameter of blade: 2.3mm
4. Length of cable (m):3.0m

Video Laryngoscope

Introduction

A rigid laryngoscope with camera used for difficult and routine endotracheal tube intubations.

Features:

- Integrated handle, easy to hold operation.
- One click to open, quick start, runs immediately.
- 3-inch HD monitor displays vocal cord and glottis images clearly.
- Integrated formed and anodized aluminum alloy surface which is firm and wear-resistant.
- 90 degrees rotated screen, easy for observation and intubation.

Anesthesia Video Laryngoscope

Anesthesia Laryngoscope Blade

Introduction

Laryngoscope blades are used as the primary tool for examination of the interior of the larynx and for placement of an endotracheal tube

Features:

- Improved geometry simplify intubation .
- High-quality design from medical-grade.
- Medical Class ABS Material.

Disposable Infusion Pump

Introduction

Provide medication at accurate continuous pre-fixed flow with additional bolus doses via patient controlled analgesia (PCA) module. Designed for systemic or regional preoperative and postoperative pain management therapy.

Features:

- A variety of capacity specifications to select.
- Medical silicon balloon, ensure the continuous and stable pressure release.
- The infusion tube is equipped with a precision medical liquid filter, which can effectively filter the particles that may exist in the medical liquid to ensure the safety of the patient's infusion.
- With a PCA device, the patient can dose based on the actual needs.
- Professional dosing device, easy to dose temporarily during use.
